DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 39-73, drawn to a massaging apparatus.

Group II, claim(s) 74-79, drawn to a massaging apparatus including a control element and a memory for storing the position of the therapeutic member.

Group III, claim(s) 80-83, drawn to a massaging apparatus having an air cell, and a detecting means for detecting inflation and deflation of the air cell.

Group IV, claim(s) 84-91, drawn to a massaging apparatus having a detector for detecting a load.

2. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: each Group has a different mode of operation.

3. This application contains claims directed to more than one species of the generic invention in Group I. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

An optical sensor represents species 1; a limit switch represents species 2; a lead switch represents species 3; a variable resistor represents species 4; and a sensor comprising a magnetoelectric converting element represents species 5.

Art Unit: 3764

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

4. The claims are deemed to correspond to the species listed above in the following manner:

An optical sensor represents species 1; a limit switch represents species 2; a lead switch represents species 3; a variable resistor represents species 4; and a sensor comprising a magnetoelectric converting element represents species 5.

The following claim(s) are generic: no claim is generic.

5. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the different sensors have different modes of operation.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Art Unit: 3764

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
